

CERB

**THE MULTI-FACTOR USER
AUTHENTICATION SOLUTION**

Cerb AS is a multi-factor user authentication solution. It's one of the first in the world to use a dedicated mobile application to generate one-time passwords. It enables centralized user management and ensures secure access to different IT services using a variety of identity verification methods including smartphones and hardware tokens.

- Mobile application generating tokens independent of the GSM network.
- SMS (text message) broker support for sending one-time passwords in text messages.
- Yubikey, ActivIdentity and RSA hardware tokens, TAN cards and static passwords support.
- SDK for seamless integration with existing banking systems.
- Active Directory support enabling importing user definitions from different AD domains.
- RADIUS protocol implementation enabling seamless integration with solutions from IT vendors such as Juniper, CISCO, Checkpoint, Fortinet or Nokia.
- Self-registration service for faster provisioning and lower maintenance efforts.
- Push notification support.
- Web-based management interface.

Wheel Systems is the leading vendor of innovative IT security solutions. We specialize in privileged access management, user authentication and authorization and SSL/TLS encrypted traffic inspection. Our products combine strong security with a user friendly interface which ensures seamless deployment and convenient maintenance. Currently we serve over 200 clients through a network of 70 partners in 20 countries. We strongly believe in innovation. We were one of the first in the world to introduce a mobile application for generating one-time passwords. We launched a privileged session management solution, the very first in the world to enable real-time supervision. Currently we are launching the fastest SSL/TLS traffic inspector.
