Red Teaming

An effective simulation of targeted attacks to greatly improve your security posture

CERTIFIED PARTNER

OCURA SECURING YOUR BUSINESS

Can your network fend off the best attackers?

Red Teaming — continuously simulated targeted attacks on your company using the most advanced tactics, techniques, and procedures (TTPs) from hackers' arsenals

Red Teaming —

Full-scale attacks with your security team involved — designed to answer the following questions:

- ✓ Are your systems prepared to prevent, detect and respond to real-world incidents?
- ✓ How does your security team deal with a targeted attack?
- ✓ How should your approach to security be changed to improve the company's defensive capabilities against cyber-attacks?

The term "Red Teaming" comes from the military practice of having a portion of the team during war games play the role of the enemy (the "Red Team") as opposed to the friendly forces (the "Blue Team")

Red Teaming is not limited by time.
Our dedicated Red Team, constantly testing to ensure security systems are working optimally, closely mimics a real attacker who can prepare for attacks trying various tools and vectors for months

Red Teaming Methodology:

Jointly determining objectives and tools to simulate threat actor behavior

›

Continuous simulations of targeted attacks which only CISO is informed about

›

Monitoring for changes in your infrastructure, which increase attack surface

You will get:

- ✓ Summary for senior-level management
- ✓ Technical details with our findings and expert recommendations for improvement of your security systems
- ✓ Emergency notifications of critical vulnerabilities

Red Teaming can help you to be prepared for targeted attacks, identify and mitigate complex vulnerabilities, and enhance your security team's ability to respond to real-world incidents

About Group-IB:

Our specialists have contributed to development of the world's leading practical security projects, including OWASP (Open Web Application Security Project)

We see your systems 'through hacker's eyes'

14 years of expertise in forensics and cybercrime investigations. 1000+ successful investigations worldwide including 150 high-profile cases. 25,000+ hours of incident response activity

10 years of experience auditing

large portals, banking and industrial systems. We do not trust "paper security" and carefully analyze the true level of protection of your business, systems and processes deployed

Threat Intelligence

data used by Group-IB specialists to provide this service is ranked among the best threat intelligence services in the world by Gartner (2015), IDC (2016), and Forrester (2017)

Malware analysts

of the largest forensic laboratory in Eastern Europe daily enrich our knowledge database of attack tactics and tools
